

ABSTRACT

To provide a projection display apparatus of good portability capable of realizing brightness equivalent to that of a conventional display apparatus and displaying a bright projected image upon supply of power.

It has an extra high pressure mercury lamp 1, a lamp unit 3 for thereby generating first light and light-emitting diodes 11 (a) to 11 (c), and includes a solid state light source unit 14 for thereby generating second light, a movable mirror 21 and a mirror portion adjusting mechanism 101 for selectively guiding the first light or the second light to reflective indicating elements 41 (a) to 41 (c), and a projection lens 51 for projecting the light modulated by the reflective indicating elements 41 (a) to 41 (c).
